

Lifeguard Tower

Using geometric figure, triangle, incorporated with 'sails' that is a symbol of Auckland to express our idea about this project. This tower has three floors. The first floor includes a room for communication and an emergency place; the second floor is mainly used for observation by Lifeguards; the top floor has broader horizon and it can be used as a command post in case of emergency. A ladder connects three floors. We think bamboo is perfect material, cost effective, organic and Eco friendly.
